

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

February 6, 2002 LB 429

Cunningham. I am going to ask Senator Janssen some of these questions, but one reason I didn't, he doesn't do much volume in food stamps so he might not have the practical experience you have, Senator Cunningham I am speaking to, and that's why I was kind of asking you some of these. I won't ask any more on my close because I don't have enough time in my closing, but on my next motion I will. The main points that were made at the beginning against this bill have not been successfully countered. Senator Cunningham, along with Senator Baker and Senator Janssen, are going to be very resistant. They will not back away from this bad bill. So if there are ten good arguments, and there is going to be a debate or a discussion, the ten good arguments are repeated again and again. Why do you do that? Sometimes, you use the drop of water at a time philosophy. A single drop of water or dropping water a drop at a time on a stone persisted in long enough will wear away the stone. Water is almost the universal solvent. It is not the universal solvent.

SPEAKER KRISTENSEN: One minute.

SENATOR CHAMBERS: There is no such thing as a universal solvent. If there were a universal solvent, it would dissolve any container in which it was put. But there is no substance I'm aware of which will dissolve anything into which it is put. If there were such a thing, it would have eaten its way clear through the earth and it wouldn't be here any more anyway. But water is close to it. What is softer than water? What is harder than stone? Yet the water will prevail over the stone. Most bone is not as strong as stone. So if water can prevail over bone, if we keep asking these good questions, they will insinuate themselves through that bone surrounding the brain, and they might listen, take note, and hear what is actually being said. But I've been told by my colleagues that the difference between good treatment of their customers and bad treatment is a nickel. Give them a nickel and they will give people better treatment. If that were true, I wouldn't admit it.

SPEAKER KRISTENSEN: Time.
